

## Coffee Grounds/ Food Solids trap

European Patent Number  
EU 06076127

The Renflo Coffee Grounds/Food Solids Trap is a stainless steel unit lined with a sealed polythene liner which works as a trap to remove settleable solids from waste water discharge. It is designed to be located above ground within the drain run from kitchen sinks or coffee machines to the main drainage stack.

### Technical Drawing

### Installation

The Renflo Coffee Grounds/Food Solids Trap is supplied complete and ready to be fitted by a qualified plumber. It requires 50mm rubber couplers (supplied including nut spinner) for both the inlet and outlet. 100mm space is required all around the unit for access.

### To install

- 1) Locate the Renflo Coffee Grounds/Food Solids Trap where access will be simple for replacing the liner periodically.
- 2) Connect the waste pipe from the sinks or coffee machine to the inlet of the unit ensuring good fall.
- 3) Connect the outlet of the unit to the drainage stack ensuring good fall.
- 4) Allow water to flow filling the liner ensuring it inflates properly and water flows through easily.

### Maintenance

Before attempting to change the liner ensure you have replacement liners. Liner replacement is recommended when the liner is 75% full of solids.

- 1) Undo the rubber couplers on both the inlet and outlet and slide them away from the unit. Seal ends with end plugs provided with replacement liner.
- 2) If necessary slide the unit out to allow better access.
- 3) Remove the lid and the liner can be lifted out and replaced with a new one.
